Reverse percentage can be calculated by dividing a known amount by 1 minus the discount rate or 1 plus the tax rate. Such calculations are helpful in determining the original price of a sale item purchased or the pretax price of a transaction already done. The formula for finding percentages is to divide part of the whole quantity by the whole quantity and then multiply by 100 percent. A percentage change can be found by simply dividing the old quantity into the difference between the old quantity and the new quantity. Larson, R. & Larson, E. (2011). Creating bulletproof business cases. Paper presented at PMI® Global Congress 2011—North America, Dallas, TX. Note. The following also provides information about new features, security updates, and non-security updates for Visio Pro for Office 365 and Project Online Desktop Client.
